VANCS - SERIES - TM

(FRP) SEMI-VORTEX - SEA WATER PUMPS

SPECIFICATIONS

■ FEATURES

- Semi-vortex , FRP (Fiberglass Reinforced Plastic), impeller passes solids and stringy material without clogging and increases wear resistance when pumpage contains abrasive particles.
- Double inside mechanical seals with silicon carbide faces, running in an oil filled chamber and further protected by a lip seal, provides for the most durable seal design available.
- Highly efficient, continuous duty, air filled, copper wound motor with class E insulation minimizes the cost of operation.
- 4. Built in thermal & amperage sensing, protector prevents motor failure due to overloading, single phasing (in three phase units), or accidental run -dry conditions.

- Double shielded, permanently lubricated, high temperature C3 ball bearings rated for a B-10 life of 60,000 hours, extend operational life.
- Utilization of application appropriate FRP & Titanium components increases corrosion resistance in a wide variety of applications.

■ APPLICATIONS

- Salt wastewater and site drainage.
- 2. Chemical spill containment.
- Decorative waterfalls, salt water, fountains and fish ponds.
- 4. Bilge pumps.
- 5. Salt water aquiculture.

VANCS - SERIES - TM(FRP) SEMI-VORTEX - SEA WATER PUMPS

SAMPLE SPECIFICATIONS

1. SCOPE OF SUPPLY -	
Furnish and install TSURUMI, VANCS Model capable of deliveringGPM(m³/min) atdesigned to pump waste water, seawater or effluent containing _ damage during operation. The pump(s) shall be designed so that exceed the motor rated output throughout the entire operating randischarge size shall beinch, (mm).	inch (mm) diameter solids without the shaft power required (BHP)/(kW) shall not
2. MATERIALS OF CONSTRUCTION -	
Construction of major parts of the pumping unit(s) including pump intermediate brackets shall be manufactured from recyclable, app protective coating shall not be required. All exposed fasteners shanchors integrally cast into the mating part. All units shall be furr Impellers shall be of the multi-vane, semi-vortex, solids handling of motor shaft shall be machined to provide a positive drive of the imrelief valve.	olication appropriate resins. The need for a nall be Titanium and shall have Titanium mating nished with a NPT discharge companion flange. design and shall be slip fit to the shaft. The
3. MECHANICAL SEAL -	
All units shall be furnished with a dual inside mechanical shaft sunning in a separate oil filled chamber. Units shall be fitted with a top mechanical seal, (down to one third of the standard oil level). electrical power. Units shall have silicon carbide mechanical sea Stainless steel.	a device that shall provide positive lubrication of The device shall not consume any additional
4. MOTOR -	
The pump motor(s) shall beHp.,kW.,V., 60 Design Type B equivalent. Motor(s) shall be rated atfull factor and shall be rated for 6 starts per hour. Motor(s) shall be a built in thermal and over amperage protection. Motor shaft shall be permanently lubricated, high temperature ball bearings, with a B-hours. The bearings shall be single row, double shielded, C3, deshall be rolled carbon steel or aluminum die casting. Motor housing variable speed applications, utilizing a properly sized variable free	ir filled, copper wound, class E insulated with be Titanium and shall be supported by two 10 life rating at best efficiency point of 60,000 ep groove type ball bearings. Bearing seats ng shall be Titanium. Motors shall be suitable
5. POWER CABLE AND CABLE ENTRANCE -	
The pump power cable shall be suitable for submersible pump ap built in strain relief, a one piece, three way mechanical compress cable entrance assembly shall contain an anti-wicking block to elic Capillary wicking should the power cable be accidentally damage.	ion seal with a fatigue reducing cable boot. The minate water incursion into the motor due to
